EDUCATION

New Jersey Institute of Technology | Newark, NJ **Expected May 2028**
B.S. Computer Science

Mercer County Community College | West Windsor, NJ **May 2026**
A.S. Computer Science, Certificate: Data Analytics, GPA: 3.88

Relevant Coursework: Data Structures and Algorithms, Object Oriented Programming, Python Programming, Database Management, Computer Architecture, Data Analysis, Statistics

EXPERIENCE

Software Engineer Intern | Sela Cloud **January 2026 – March 2026**

- Developed an ETL pipeline using TypeScript and AWS Lambda to normalize client billing data and load it into an Amazon Redshift data warehouse, replacing a paid vendor and cutting the team's tooling costs by 15%.
- Engineered a Salesforce portal with Lightning Web Components and Apex services, replacing a legacy client dashboard and giving clients real-time visibility into cloud-spend data while cutting load times by ~50%.
- Built a ticket management system within the Salesforce portal using Apex triggers and handler patterns, allowing clients to submit requests and replacing a manual process where employees logged tickets in Jira.

Vice President & Software Engineer | Computer Science and AI Club **May 2025 – May 2026**

- Designed and facilitated a hands-on workshop teaching 20 students to leverage AI tools to build and ship personal portfolio websites from scratch, achieving a 100% success rate with each student building a fully deployed site.
- Engineered and maintained the CS Club's website using HTML, CSS, and JavaScript, collaborating with student engineers to design new features and improve overall functionality for 50+ student members.
- Integrated a Google Apps Script backend to process membership sign-ups directly from the site, automatically recording submissions in Google Sheets and reducing manual admin work for officers by 80%.

PROJECTS

Smart Merge | *React, Spring Boot, PostgreSQL, OpenAI* **July 2026**

- Built a full-stack GitHub App with Spring AI: backend reviews pull requests by verifying webhooks, generating a GPT review, and posting comments on GitHub; React/OAuth dashboard lets users track PRs and install new repositories.
- Engineered the review pipeline to generate both a summary review and inline comments, numbering every line in the prompt so the model targets exact positions, leading to highly accurate inline comment placement.
- Secured the app against forged requests and data leaks using constant-time HMAC-SHA256 webhook verification, JWTs in HttpOnly cookies to block XSS theft, and per-user ownership checks on endpoints to prevent IDOR.

PERN Merch Store | *React, Spring Boot, PostgreSQL, Stripe, Docker, AWS* **June 2026**

- Built and deployed pernmerch.com, a merchandise e-commerce site for my band PERN that has sold 50+ items, with a CloudFront/S3 frontend, a Lightsail backend, and a role-gated admin dashboard for inventory and order management.
- Designed a stateless REST API secured with JWT authentication, including a custom request filter, BCrypt password hashing, and transaction-aware async emails that fire only after an order commits.
- Prevented overselling during concurrent checkouts with pessimistic row locks on per-size inventory, plus a scheduled sweeper that reclaims abandoned cart stock and auto-recovers paid orders after lost webhook deliveries.

Company Funds & Layoffs | *MySQL, Tableau* **January 2025**

- Analyzed a 2,300+ row dataset in MySQL to investigate links between company funding and workforce reductions, applying nested CTEs, window functions, and self-joins to rank companies and industries over 4 years.
- Built an end-to-end analytics workflow spanning a dedicated SQL data-cleaning stage, analysis, and a published interactive Tableau dashboard, self-directing six research questions and translating query output into visual findings.

SKILLS

- **Programming Languages**: Java, Python, TypeScript, JavaScript, Apex, PostgreSQL, MySQL, HTML, CSS, C++
- **Libraries & Frameworks**: Spring Boot, Node.js, React, JUnit, Lightning Web Components, Bootstrap
- **Developer Tools**: AWS, Git, Docker, Claude Code, Stripe, Salesforce DX, Postman, Figma, Jira, Tableau, Excel
